

Integrated Barcoding Systems, Inc. names Global Software, Inc. technology partner to revolutionize Microsoft® Excel automation with new QuikTrac® Spreadsheet Server and QuikTrac® ExeView

ADRIAN, MICHIGAN, USA (October 29, 2007) – Global Software, Inc., the number one provider of Microsoft Excel-based automation and analysis tools to the leading enterprise resource planning (ERP) platforms, today announced the technology partnership with Integrated Barcoding Systems (IBS), a leading solutions provider of data collection technology with an excellent reputation for delivering quality business solutions for ERP and material requirements planning (MRP) users. Global and IBS together announce the release of QuikTrac Spreadsheet Server and QuikTrac ExeView to revolutionize the way clients retrieve ‘live’ data from the Microsoft Excel environment.

Powered by Global Software, Inc.’s Excel automation technology, QuikTrac Spreadsheet Server (QTS) is an innovative Excel add-in that allows users to access live financial data within Excel, while maintaining the full ability to drill down into sub-systems (i.e. AP, AR, FA, invoice details, material transactions, etc.) QTS will allow end-users to leverage the familiarity of Microsoft Excel as a reporting and analysis tool for live, dynamic data. QuikTrac ExeView (QTE) is a ‘buffet-style’ analysis tool that brings disparate systems into Excel, combining the power and functionality of QuikTrac Spreadsheet Server with access to any and all data sources, such as shop floor and inventory-related data.

QTS and QTE are offered as additional modules for IBS’ flagship product, QuikTrac, which provides customers with a high-quality, user-friendly software interface to help integrate data collection functionality into ERP systems such as, Infor™ XA, BPCS®, System 21, JD Edwards®, Infor™ SyteLine and Microsoft® Dynamics AX. QuikTrac data collection connectivity software helps manufacturers extend their systems to remote locations, such as warehousing and distribution centers – without costly, long-term modifications to their host applications.

“The disparate environment of manufacturing means tracking expenses and keeping payables in check is more important than ever,” noted Deana Mitchell-Tavolacci, Director, Channel Alliances for Global Software, Inc. “If data is not tracked appropriately and timely, organizations can set themselves up for potential corporate accountability problems down the road. It is a process ripe for cost-cutting and time-reducing measures. With the release of QTS and QTE, IBS will be able to leverage Global’s Excel automation technology and IBS’ position as one of the leading data collection technology providers to significantly enhance the way clients do business.”

“Our customers have been calling for an Excel-based solution such as the powerful combination of QTS and QTE,” added Andy Jacobs, President of Integrated Barcoding Systems, Inc. “We answered by partnering with Global in our mission to provide powerful Excel automation technology that can be utilized during the scanning of inventory items – directly from the shop floor within the comfortable environment of Excel.”

About Integrated Barcoding Systems, Inc.

Integrated Barcoding Systems data collection solutions are designed to provide users of ERP and MRP systems with the fastest, simplest and most cost-effective tools to automate their data collection process. The company’s flagship connectivity solution, QuikTrac® 5 has been successfully installed into Infor™ XA, BPCS®, Infor™ SyteLine System 21, JD Edwards®, PRMS, and AS/400 legacy systems. Integrated Barcoding Systems is headquartered at 1801 West US 223, Suite 115, Adrian, Michigan. For more information, visit www.intbarcode.com.
